AMP LIFYYOU

Putting AI to Test

Technology's Next big Wave...

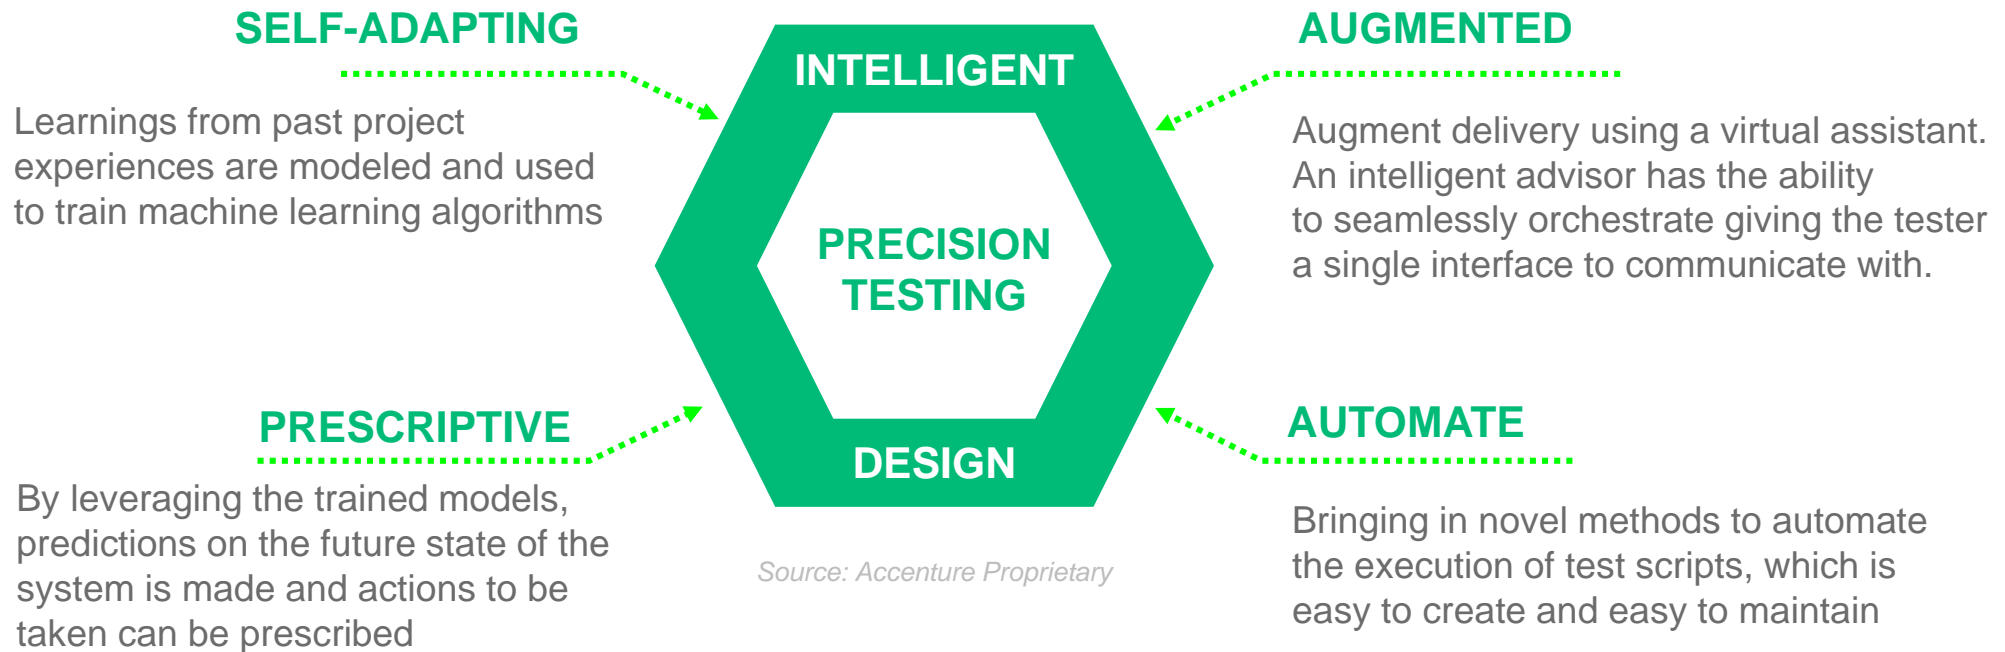

LET'S ASK

CAN WE USE AI FOR TESTING?

PRECISION TESTING IS ONE OF THE SOLUTIONS THAT ADDRESSES THE DEMANDS FOR 'EFFICIENCY' OF NEW AGE APPLICATIONS

Precision Testing is a suite of modern **Machine Learning, Artificial Intelligence and Statistical Modelling** algorithms that aims to bring '**efficiency**' into Testing. It offers innovative solutions over different phases of the testing life-cycle, from planning to design and execution.

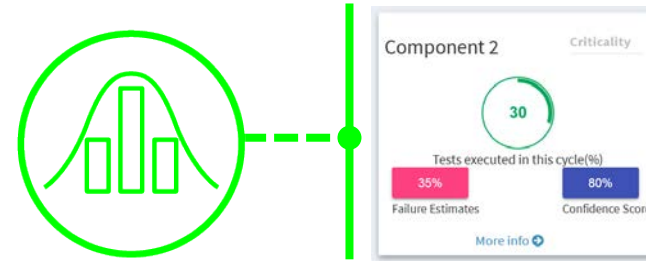

PREDICTIVE ANALYTICS USING BAYESIAN STATISTICS

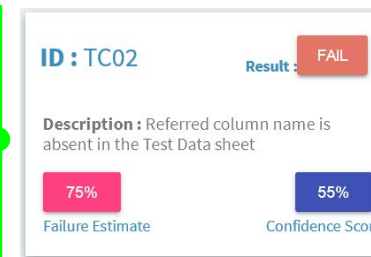

SELF-ADAPTING

Predictive analytics learns from past test results to predict future outcomes & help prioritize the testing effort.

- Where should I prioritize my testing effort?
- Can I predict whether a test script is going to pass or fail?
- How effective has been my testing?

Learn from past data using Bayesian Statistics

Predict test failures using Machine Learning

Visualise testing efficiency over

TEST MANAGEMENT THROUGH SIMILARITY ANALYTICS

PRESCRIPTIVE

Eliminates redundancies, brings deeper insights, and makes intelligent recommendations for effective test management with reduced costs and efforts.

- Are our test suites bloated?
- Are we raising similar defects again?
- Are our defect fix assignments getting redirected again?
- Are we designing regression test-suites with assessment of underlying risks?
- Are our tests yielding deeper insights?

Learn from past defect logs and test suites

Identify duplicates and semantically related tests and defects using similarity analytics

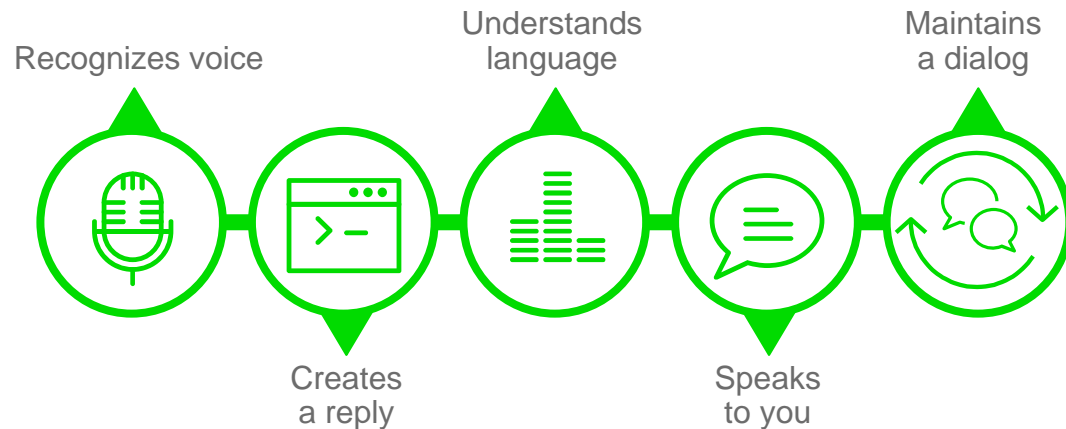

Visualize central problem areas, their coverage and interrelatedness

THE INTELLIGENT VIRTUAL AGENT FOR TESTING: AKA TESTING ADVISOR

AUGMENTED

The testing advisor assists the tester through the entire project lifecycle by providing project specific knowledge, as well as ai based decision and diagnostic support.

Knowledge Advisor that bootstraps new testers

Decision advisor through Predictive and similarity analytics

Diagnostic Advisor through similarity analytics

Conversational Interface as a Decision Advisor

Testing advisor: Hi John.
What can I do for you today.

John: please suggest the next set of test cases to execute

Testing advisor: There are 3 modules: Excel Reader, Grammar, and Scope Resolution which have high business criticality and high fault prediction. I suggest that you start testing these modules.

John: show me the test cases of the ExcelReader.

Testing advisor: The ExcelReader module has 25 test cases. Displaying the details.

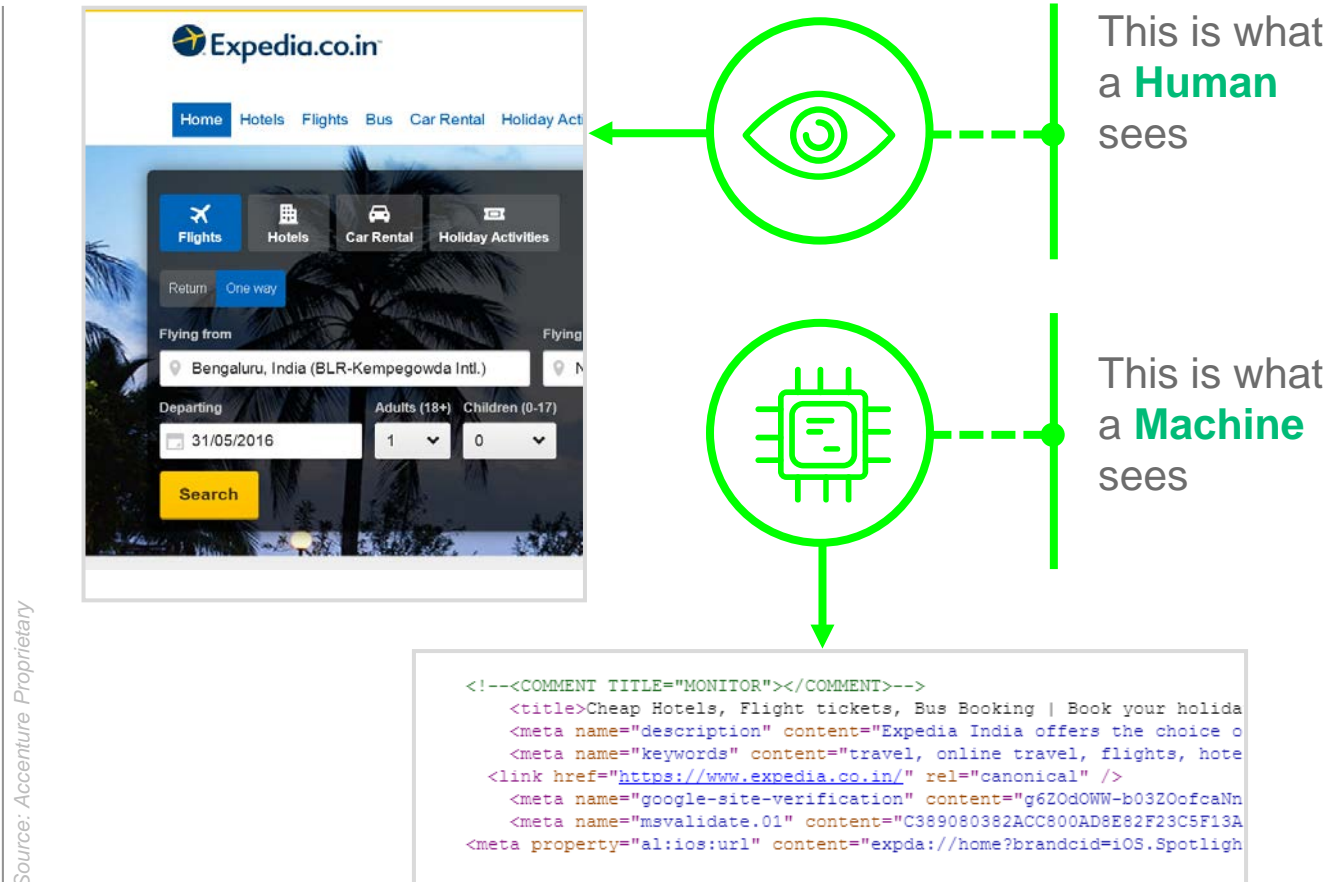

TEST AUTOMATION THROUGH COMPUTER VISION

AUTOMATE

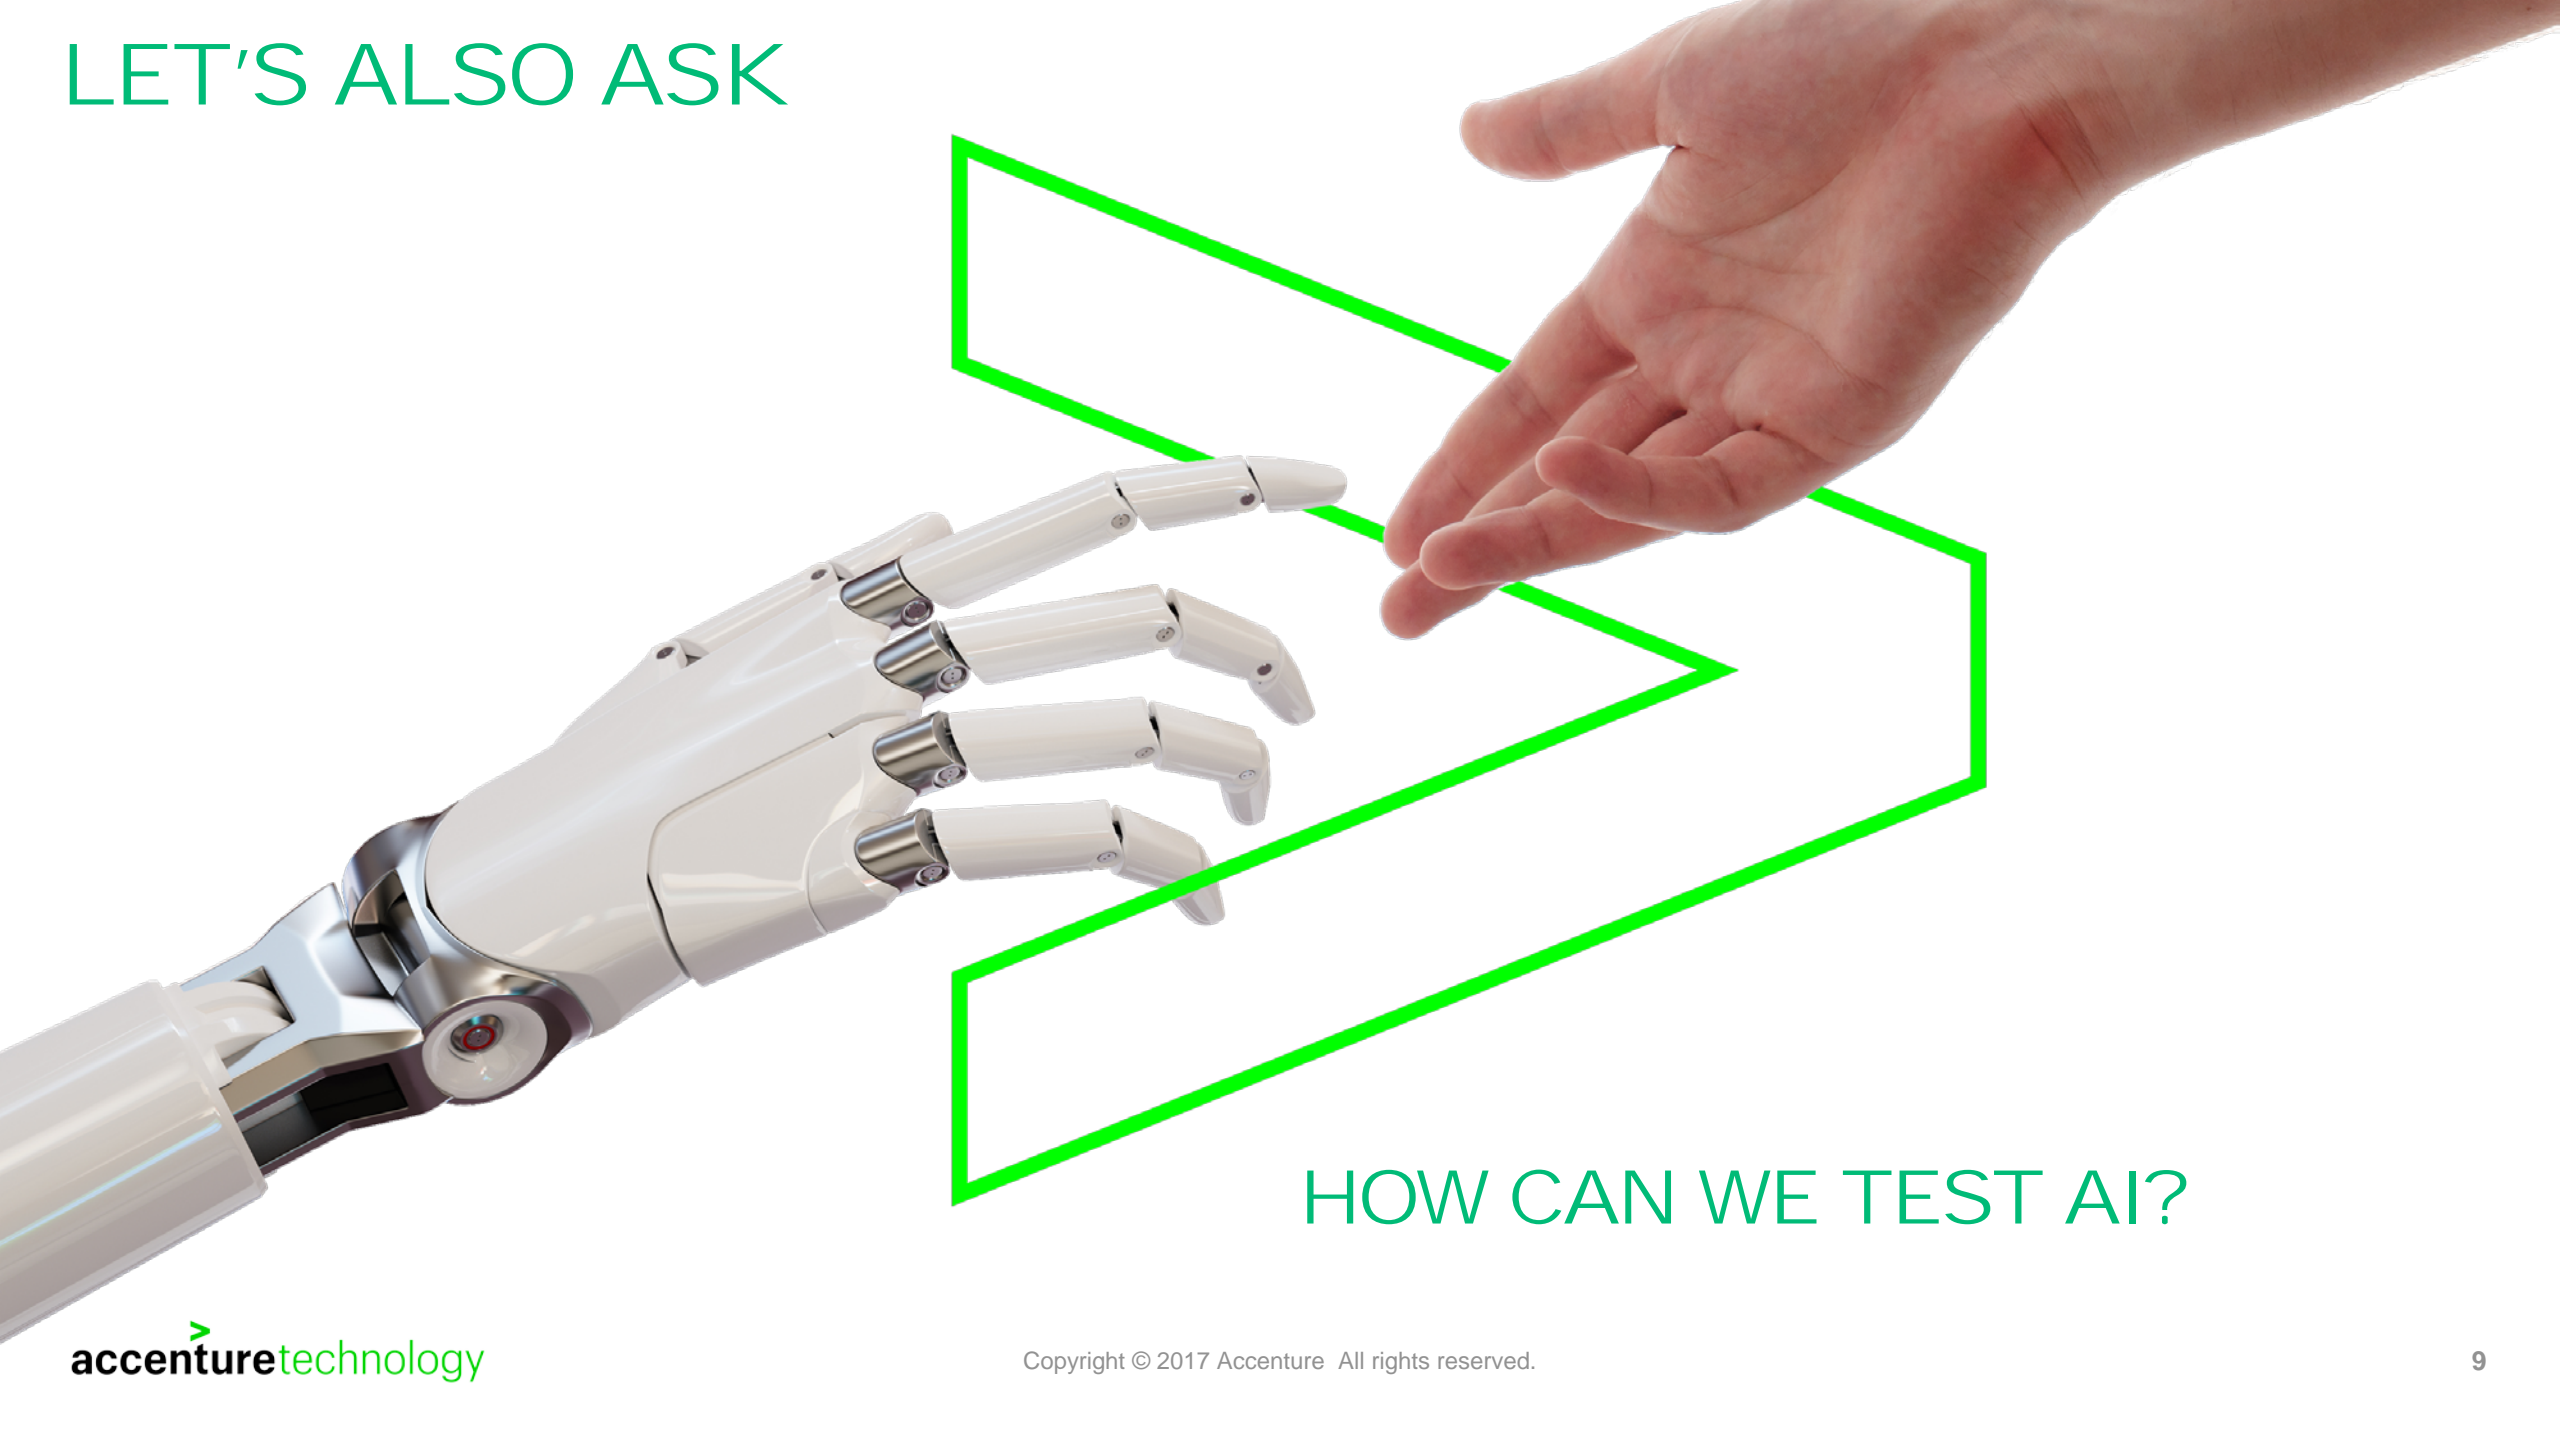

A manual tester interacts with the application through what he perceives visually. However, all automation tools need implementation details.

Can we bridge this gap by creating machines that test software like humans?

- Create automation scripts through descriptive language
- Automate without needing details of implementation
- Automate Web & Non-Web applications

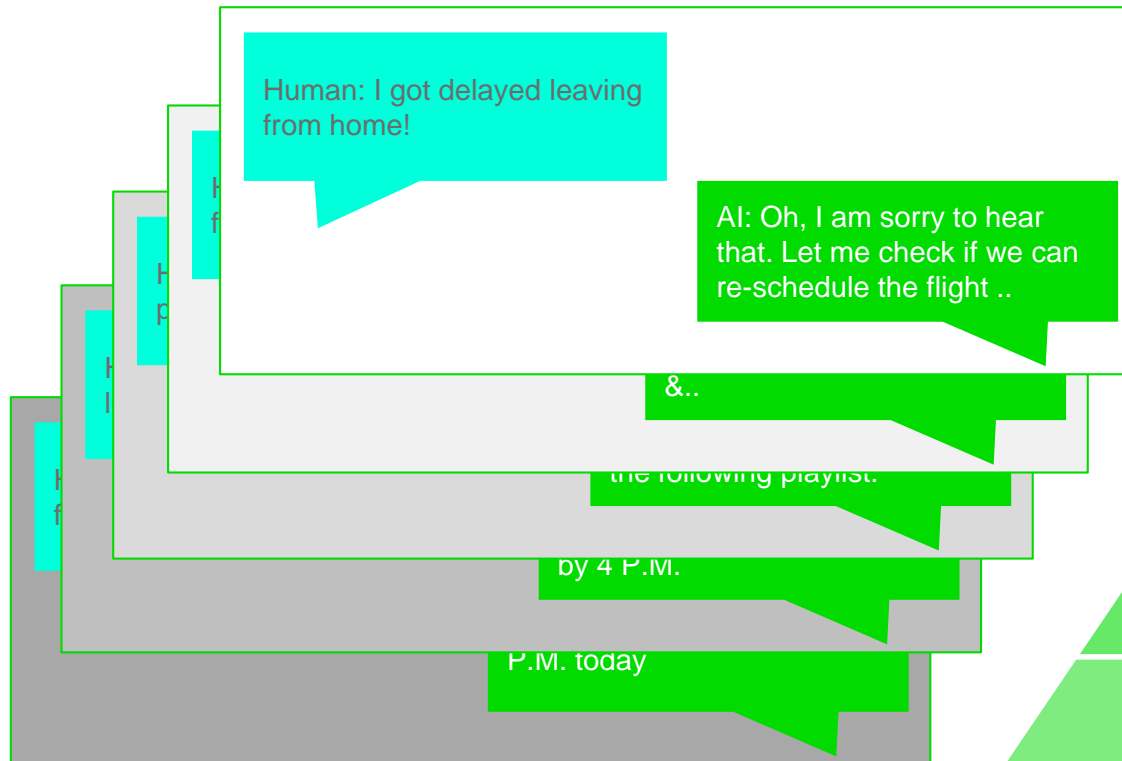

LET'S ALSO ASK

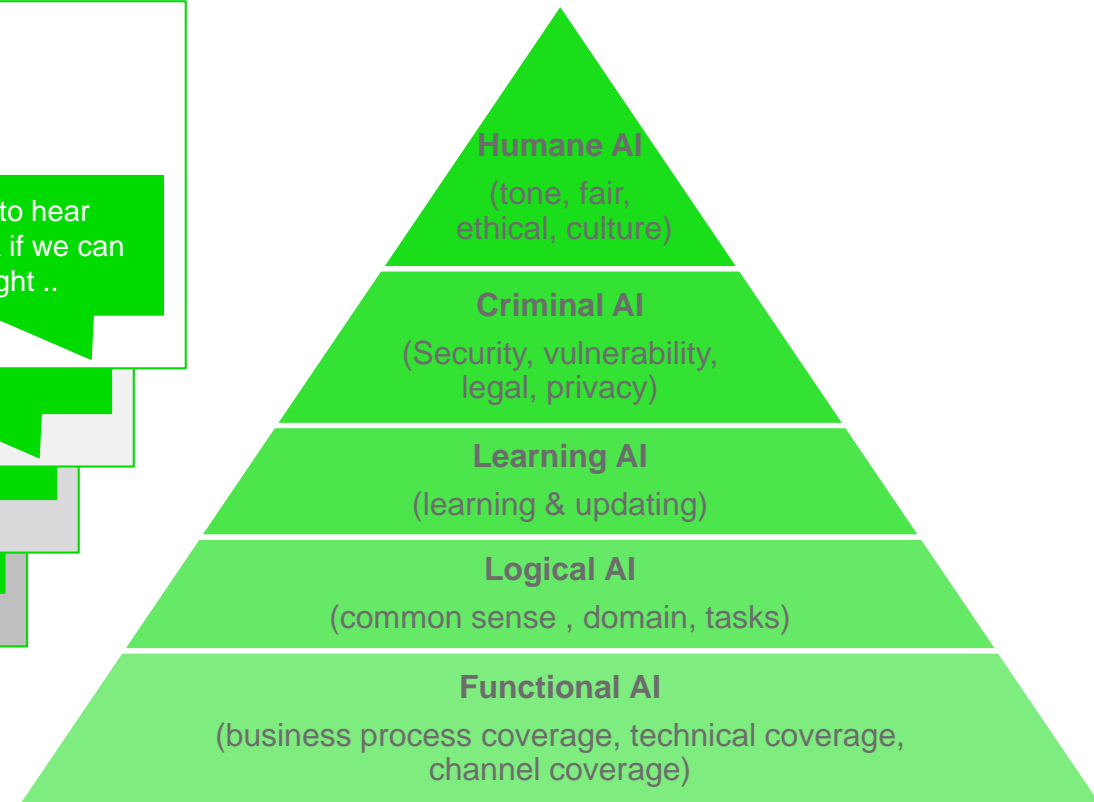

HOW CAN WE TEST AI?

BLACK BOX TESTING: AI CAN BE EXPONENTIALLY MORE DIFFICULT
